

## Superior surveillance, round the clock effectiveness

### WZ Series CCTV Cameras

Cost effective, infrared day/night cameras

**BOSCH**  
Invented for life

As any residential or commercial property owner is well aware, being able to monitor your premises during the vulnerable hours of night-time is just as important, or even more so, than during the day. Fortunately, advances in infrared technology allow Bosch to offer superior low light and no light performance even in its entry-level WZ Series of day/night cameras.

Part of Bosch's Easy Line range, WZ Series cameras are quick and easy to install and offer a high quality yet affordable surveillance solution for small business and residential applications. Suitable for both indoor and outdoor installation, the WZ Series superior infrared

capabilities enable true 24-hour protection and clear and accurate night-time surveillance images.

#### **Great images whatever the conditions**

Integrated long-life LED infrared illumination ensures uncompromising surveillance performance in total darkness. Whatever the lighting conditions, the WZ Series offers high resolution images at up to 540 TVL (equivalent to DVD quality). Plus, the varifocal lens is infrared-corrected to give the same sharp image quality regardless of day or night operation, making installation simple and minimizing video storage demands with low-noise images.

## A robust range of cameras

The WZ Series comprises five analog cameras. Choose from our range of four bullet cameras (WZ14, WZ16, WZ18 or WZ20) and one dome camera (WZ45N). Compact and incredibly tough, they all feature vandal-resistant housings and are the ideal solution for all residential and small commercial sites such as shops and offices.

## The Bosch connection

Give your customers the complete confidence of Bosch quality and reliability. All WZ Series cameras include a full three year warranty, comprehensive global after sales support and advance replacement guarantee.

You can also offer your customers complete system solutions. For example, the Bosch Video Recorder 400 Series is the perfect complement to the WZ family – providing hassle-free, cost-effective video management and recording for systems of up to four cameras.

Features	Benefits
Up to 540 TVL	High resolution imaging whatever the conditions
Integrated long life LED infrared	Enables true 24/7 protection
Infrared corrected lenses	High definition images in complete darkness
IP67/66 environmental rating	Uncompromising performance in even the harshest outdoor conditions
Robust construction, compact design	Vandal resistant, discreet installations
-30 °C to +55 °C operating temperature	Reliable operation in extremes of hot and cold
Easy installation	Minimize installation costs

For an easy to install, high quality surveillance solution that delivers reliable performance day and night, look no further than our WZ Series of IR enabled day/night cameras
